```java
package first;
import java.io.File;
import java.io.FileWriter;
import java.io.BufferedWriter;
import java.io.IOException;
public class filehandling {

        public static void main ( String[] args ) {

            try {
                String data = " hello world";
                File f1 = new File("D:\\new file.txt");
                if(!f1.exists()) {
                    f1.createNewFile();
                }

                FileWriter fileWritter = new FileWriter(f1.getName(),true);
                BufferedWriter bw = new BufferedWriter(fileWritter);
                bw.write(data);
                bw.close();
                System.out.println("file successfull created ");
            } catch(IOException e){
                e.printStackTrace();
            }
        }

}
```
